Success Criteria for SF - Agriculture

The SF - Agriculture Projects will be considered a success if . . .

Micheloni Mirko - Pavan Andrea - Vidrascu Adrian - Zuccolotto Devis

A fully functional test system is delivered on or before March 29th.

The system shall be delivered in a state that is ready to be used in its intended production environment for its intended purpose. The users shall be given the training they need in order to begin using the system. We will consider both of these goals met if the users who plan to use the system during its test period fill out the attached Acceptance Test User Survey and:

- No one circles "No" on the first two questions
- If anyone circles "Yes, with reservations" on the first two questions, these reservations shall be resolved prior to April 4th to the satisfaction of the users with the reservations

Concerns raised during the test period are addressed according to the problem resolution plan contained in the Software Project Management Plan

All critical defects found before April 15th will be fixed. A critical defect is one for which there is no convenient workaround. Beyond fixing defects, requested changes will be handled on a sliding scale. Changes taking 30 hours or less will be done if notified of the change 3 weeks before the scheduled end of the project. Changes taking 20 hours or less will be done if notified of the change 2 weeks before the scheduled end of the project. Changes taking 10 hours or less will be done if notified of the change 1 week before the scheduled end of the project.

Users shall be notified of their rights and responsibilities under this policy prior to the start of acceptance test.

Users can easily log into the system.

This specifically means that a users will be able to select the login option, type their first and last name or some portion of their first and/or last name, select events and press a confirmation button.

SF - Agriculture supervisors can create and edit user accounts.

This includes officer, volunteer and youth accounts. All data should be editable from the Internet interface.

The System is properly documented.

First, a user manual shall be produced and included with the system. This user manual shall be easy to understand for non-technical users familiar with basic Internet and spreadsheet concepts. This manual shall explain only how to use all features of the system.

Second, a system manual shall be produced. This system manual shall consist of the architecture document, as well as any additional material required to provide a technician with all necessary information needed to maintain and update the system.
